

## Specify setting in Igor command window

Set 2 default window widths. Switch between them with keyboard 'J'. Values specify the width of the stack window in screen pixels.

```
root:bStack:gStackWindowWidth1 = 350
root:bStack:gStackWindowWidth2 = 767.5
```

## Making a user file

- Make a .txt file in /bHyperstack\_Defaults/Users/
- Load the file from within Igor using menu 'Hyperstack -> Hyperstack - Load User File'

## Example user.txt file

```
root:bNV:gUserName="Micek"

root:Hyperstack:gHyperstackWindowSize="Small"

#root:Hyperstack:gHyperstackRootHDD="Work:jhu:Hyperstack:"
root:Hyperstack:gHyperstackRootHDD="d:Users:cudmore:Hyperstack:"

#root:Hyperstack:gHyperstackRawRepo="Work:jhu:hyperstack:rawRepo:"
root:Hyperstack:gHyperstackRawRepo="d:Users:cudmore:hyperstack:rawRepo:"

#root:Hyperstack:gDatabasePath="Work:jhu:hyperstack:intermediate_hyperstack:micek:"
root:Hyperstack:gDatabasePath="d:Users:cudmore:hyperstack:micek:"

root:Hyperstack:gLoadAndPlotOnLoad=0

#root:bStack:gIAmSuperuser=1

#micek
#gHyperstackRootHDD = "d:Users:cudmore:Hyperstack:"
#gDatabasePath = "d:Users:cudmore:hyperstack:micek:"
#gHyperstackRawRepo = "d:Users:cudmore:hyperstack:rawRepo:"
```
